

CHURCHHUB

Enterprise Church Management System

One platform. Complete hierarchy. Books you can trust.

Govern membership, treasury, remittance, and church life—from the local congregation to conference and union scale—with role-based security, denomination isolation, and double-entry financial integrity.

Scale: 100 members → 100,000+ | **For:** Clerks · Treasurers · Pastors · Overseers · Operators

[Request a Demo](#) · [Talk to Sales](#) · [Pilot Program](#)

01 · COMPANY INTRODUCTION

Enterprise discipline for ministry operations

ChurchHub was built for a simple reality: **church administration is enterprise work**. Membership records, tithes and offerings, remittance obligations, pastoral meetings, and multi-level governance cannot be managed with spreadsheets and disconnected tools. Financial mistakes are not “IT issues”—they are trust issues.

ChurchHub Enterprise is a purpose-built Church Management System (ChMS) that unifies:

- **People & pastoral operations**
- **Treasury & double-entry accounting**
- **Hierarchical organization** (General Conference → Union → Conference → Zone → District → Local Church)
- **Denomination-level multi-tenancy** for SaaS and network deployments
- **Auditability** that leadership, finance committees, and reviewers can rely on

We design for institutions that expect the same discipline they would demand from a financial system—not a consumer app with a church skin.

02 · PRODUCT OVERVIEW

A role-aware operations platform

ChurchHub is a **server-rendered, enterprise-grade operations platform** delivered through a secure web application. Staff work in a role-aware control center; members engage through a dedicated member portal.

What leaders get on day one

Capability	Outcome
Mission Control dashboard	Role-aware KPIs, action queues, teller console, pastoral pulse
Membership lifecycle	Directory, families, visitors, baptisms, transfers, leadership, gifts
Church Life	Announcements, calendar, meetings & minutes, church history chronicle
Books of record	Double-entry journals, approvals, voids via reversal, periods & working days
Stewardship stack	Receipts, expenses, budgets, giving statements, remittance & settlements
Operations modules	Payroll, fixed assets, welfare, reconciliation, reporting center
Platform control plane	Denominations, subscriptions, tenant applications, operator tooling

ChurchHub scales **with your structure**—not by forcing every congregation into a flat, single-site template.

03 · KEY BENEFITS

Value at every scale

Local church (100–2,000 members)

- Replace fragmented tools with one **permissioned workspace**
- Record offerings with **confirmation slips** treasurers can print and retain
- Keep pastoral follow-ups visible: visitors, birthdays, transfers, meetings
- Give members a **portal** for profile, announcements, and live/online meetings

District & conference (2,000–50,000 members)

- Enforce **scope**: users only see churches they are authorized to manage
- Roll up giving and remittance obligations across the hierarchy
- Standardize approval workflows and period controls
- Operate a **teller console** for high-volume service processing

Unions, networks & denominations (50,000–100,000+)

- Isolate tenants with a **denomination wall** (SaaS multi-tenancy)
- Provision churches with financial defaults and subscription awareness
- Run a separate **platform lane** for operators—without mixing institution data
- Deploy with PostgreSQL, Redis, Celery, HTTPS, and health checks

Cross-cutting value

Benefit	Why it matters
Financial integrity	Debits equal credits; approved journals locked; corrections via reversals
Least privilege	RBAC matrix with implies/overrides—not “everyone is admin”
Audit trails	Domain audit logs for finance, organization, communications, and more
Operational clarity	Dashboards that tell staff what to do next—not just charts
Institutional memory	Church History chronicle for milestones that outlive any officer

04 · CORE MODULES

A complete institutional suite

Module	What it delivers
Accounts & Access	Users, invitations, roles, activity logs, session security
Organization	GC → Union → Conference → Zone → District → Church; onboarding & transfers
Members	Profiles, families, visitors, baptisms, departments, leadership, gifts, records
Meetings (Events)	Scheduling, attendance, minutes workflow, online join links
Announcements	Draft → approve → publish; calendar of birthdays, meetings & events
Church History	Searchable institutional chronicle scoped by church or conference
Transactions (GL)	Chart of accounts, receipts/expenses, approvals, voids, working day, periods
Ledger UI	Category-driven journal posting templates into the books of record
Budgets	Planning and variance visibility against operational spend
Giving	Member giving visibility and statements (permission-controlled)
Remittance	Policies, cut-offs, settlements, welfare workflows
Payroll	Staff/pastor payroll integrated with accounting patterns
Assets	Fixed asset register, policy, lifecycle controls
Reports	Report center with export formats for leadership review
Dashboard	Mission Control, notifications, cut-off workspace
Member Portal	Login, profile, announcements, live meetings
Site Control	Denominations, subscriptions, payments, platform announcements

05 · SECURITY

Security is the operating model

Security is not a feature toggle. ChurchHub treats identity, authorization, and financial immutability as first-class product requirements.

Identity & access

- Django session authentication with CSRF protection on mutating requests
- Role-based access control with a curated permission registry
- Hierarchy-aware scoping (church → district → conference → ...)
- Platform operators use a **separate control plane**—not institution superuser shortcuts

Financial controls

- Maker-aware approval paths for sensitive postings
- Period lock and working-day gates for treasury discipline
- Idempotency on critical financial POSTs to prevent duplicate submissions
- Void via **reversing entries**—never silent edits of posted history

Data protection & operations

- Password hashing via Django's framework (never plaintext)
- Upload validation (type, size, extension allowlists)
- Audit practices designed to avoid logging secrets or payroll PII
- Optional MFA for privileged roles (policy-configurable)
- Environment-based secrets; production posture: HTTPS, secure cookies, debug disabled

06 · MULTI-TENANT ARCHITECTURE

Denomination wall. Church-scoped books.

ChurchHub supports **true institutional multi-tenancy** without collapsing every church into one shared inbox of data.

Platform (/platform/) → Denomination (SaaS boundary) → Conference → Zone → District → Church → church-owned records (members, journals, meetings, ...)

Principle	Implementation
Denomination wall	Tenant isolation at the SaaS boundary
Church as operational tenant	Day-to-day books and membership bind to local church
Server-side enforcement	Scope filters on queries—never UI-only hiding
Dual lanes	Institution apps vs platform operator console
Subscription awareness	Church provisioning and plan limits for network operators

07 · CLOUD DEPLOYMENT

Production-grade by design

Layer	Technology
Application	Django (church_system)
Web tier	Gunicorn · Nginx
Database	PostgreSQL
Cache / broker	Redis
Background jobs	Celery · Celery Beat
Static assets	WhiteNoise
Containers	Docker · Docker Compose (prod profiles)
Observability	Health endpoints · optional Sentry · metrics-ready posture

Operations teams receive environment-separated settings, deployment checklists, runbooks, and process unit examples for web and workers—favoring predictable, auditable deployments over opaque black boxes.

08 · MOBILE SUPPORT

Responsive staff app + member portal

- Bootstrap 5 interface optimized for laptop, tablet, and phone browsers
- Critical treasury and pastoral workflows usable on smaller screens
- Member portal: secure login, announcements, profile, live/online meeting details
- Portal device confirmation for new browsers; privileged session hygiene

*ChurchHub is a **responsive web platform** (staff app + member portal). Native store apps can be a future roadmap item—not a dependency for go-live.*

09 · ANALYTICS & INSIGHT

Workflow-native intelligence

- **Mission Control KPIs** — tithe, combined offering, remittance payable, action items
- **Teller Console** — live per-teller day performance
- **Church Performance** — hierarchy-aware giving visibility for overseers
- **District roll-ups** & multi-month income vs expense trends
- **This Week Pulse** — visitors, birthdays, transfers, meetings
- **Report Center** — scoped exports for leadership packs and committees

Insights sit next to the buttons that clear the queue—approve a transaction, follow up a visitor, process a remittance—not in a separate tool nobody opens.

10 · PRICING PLACEHOLDERS

Commercial packaging for sales conversations

Commercial packaging is finalized per deployment model. The tiers below are **placeholders** for structured sales discussions.

	Parish	Conference	Network / Enterprise
Best for	Single church · 100–1,500	Multi-church conference	Unions · denominations · SaaS
Members	Up to 1,500	Up to 25,000	25,000–100,000+
Churches	1	Up to ____	Unlimited*
Core ChMS + Finance	Included	Included	Included
Hierarchy roll-ups	—	Included	Included
Platform / multi-denom	—	Optional	Included
Member portal	Included	Included	Included
Support	Standard	Priority	Named CSM + SLA
Deployment	Cloud shared	Dedicated / VPC	Cloud or private
Price	\$____ / month	\$____ / month	Custom

**Subject to infrastructure sizing and fair-use policies.*

Professional services (optional)

- Data migration & chart-of-accounts mapping
- Treasurer & clerk enablement workshops
- Custom report packs
- Pilot go-live hypercare (30–90 days)

11 · CONTACT

Let's build the operating system for your ministry network

ChurchHub Enterprise is ready for pilots, conference rollouts, and denomination-scale deployments.

Sales	sales@churchhub.example
Partnerships	partners@churchhub.example
Support	support@churchhub.example
Web	www.churchhub.example
Demo	Request a guided Mission Control walkthrough

Pilot checklist (recommended)

- Select 1–3 churches for a 30–60 day pilot
- Provision hierarchy + chart of accounts
- Train treasurer, clerk, and pastor roles
- Validate remittance cut-off and approval workflows
- Enable member portal for a controlled group
- Review audit & reporting packs with leadership

ChurchHub Enterprise

Secure. Hierarchical. Financially accountable.
